

ANAND VANKHEDE

Python / Backend Developer

anand.r.vankhede@gmail.com | +91 7489634084 | linkedin.com/in/anand-vankhede | Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Python Backend Developer with 1.5+ years of experience designing and deploying secure, scalable REST APIs using FastAPI, MongoDB, and Redis. Skilled in asynchronous programming, JWT-based authentication and RBAC, real-time communication with Socket.IO/WebSockets, and cloud deployment on Azure VM and AWS EC2. Experienced in API performance optimization, caching strategies, and production Linux server management, with additional exposure to PyTorch-based inference pipelines.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript

Backend: FastAPI, RESTful API Design, Pydantic, AsyncIO, WebSockets, Socket.IO, OOP

Databases: MongoDB, Redis, NoSQL

Authentication & Security: JWT Authentication, Role-Based Access Control (RBAC), API Security

Cloud & Deployment: Azure VM, AWS EC2, Ubuntu Linux, Nginx, systemd, Load Balancing

Data & ML: PyTorch, NumPy, Pandas

Tools: Git, GitHub, Postman, Slack API

PROFESSIONAL EXPERIENCE

Software Developer

Sep 2025 – Present

GlossaryHub | Pune, India

- Architected and deployed scalable FastAPI REST APIs secured with JWT authentication and role-based access control (RBAC) for multiuser backend systems, reducing unauthorized access incidents to zero.
- Integrated MongoDB for persistent storage and Redis for high-performance caching and session management, improving API response times by up to 40%.
- Engineered CPU-only inference pipelines for PyTorch-based AI APIs using asynchronous I/O, achieving production-grade throughput without GPU infrastructure.
- Deployed and maintained applications on Azure VM and AWS EC2 (Ubuntu) with Nginx reverse proxy, load balancing, and systemd, supported by Slack-based alert monitoring for 24/7 observability.
- Established real-time communication channels using Socket.IO and WebSockets to power live document analytics and event-driven architecture across multi-user environments.

Project Coordinator Intern

Dec 2024 – Aug 2025

Splashgain Technology Solutions Pvt. Ltd. | Pune, India

- Automated data extraction, validation, and transformation workflows using Python-based scripts, cutting manual processing time across multiple data pipelines.
- Applied NumPy and Pandas for data preprocessing and feature engineering to support AI/ML model training, while supporting API-level integration, debugging, and performance testing.

PROJECTS

Challan Management System | React, TypeScript, FastAPI, MongoDB

- Engineered a full-stack management platform using React, TypeScript, FastAPI, and MongoDB to manage and monitor large volumes of transaction and operational records.
- Secured the platform with JWT authentication and role-based access control, enforcing separate permissions for administrators and end users, with search, filtering, date-range selection, pagination, bulk operations, and CSV export for large datasets.
- Designed an analytics dashboard with KPIs, status-based insights, activity trends, and interactive charts powered by optimized MongoDB aggregation pipelines.
- Implemented record-level status tracking, activity history, audit logging, and restore functionality within a modular repository-service backend architecture using Pydantic validation and asynchronous MongoDB operations.

Vehicle Data API Platform | Python, FastAPI, Redis, MongoDB

- Developed a REST API platform using FastAPI for vehicle information and verification services with API-key auth, request validation, Redis caching, and token management.
- Built a response normalization layer for consistent JSON responses and standardized error handling, with MongoDB-based API logging, XML/JSON processing, and environment-based configuration in a modular service architecture.

EDUCATION

Master of Computer Application (MCA)

2022 – 2024

School of Computer Science, KBCNMU | CGPA: 6.77 / 10

Bachelor of Computer Application (BCA)

2019 – 2022

Seva Sadan Mahavidyalaya, DAVV | CGPA: 7.37 / 10
